

Frost Limiter™

Coil System Extends Blast Freezing Production For Weeks

PACKAGED UNIT

* NOTE: Top Coil And Side Fans Removed For Clarity

GEOMETRIC COIL ASSEMBLY

If your business relies on blast freezing to produce ice cream, bakery or other commodity products, a Niagara Frost Limiter coil system can greatly improve your production quality and efficiency.

Niagara Frost Limiter inhibits frost buildup on the coil surface due to our unique geometric coil shape and an engineered air flow pattern. Reduced frost on the coil can thus extend your run times by days or (in the case of some Niagara Frost Limiter customers) even weeks. Frost Limiter also reduces the need for increased fan horsepower, shut downs and other costly problems caused by frost buildup.

The unique stainless steel construction and easy access design are also big advantages of the Niagara Frost Limiter. These features make washdown both quicker and more effective, providing a sanitary production environment. In addition, the stainless construction assures a dependable and long-lasting coil system.

All of these benefits mean the Niagara Frost Limiter coil system will provide dependable air temperatures and flow rates. The bottom line: Your product will be more consistent and higher in quality.

The Niagara Frost Limiter coil system is just one of many heat transfer innovations from Niagara Blower Company. To learn how Niagara can improve the efficiency of your production and storage facilities, please contact your local Niagara Sales Engineer or our corporate office.

Frost Limiter:

- Inhibits frost buildup on coil surface
- Extends production run times by days or weeks
- Reduces need for costly shut downs or increased fan horsepower
- Offers stainless construction that's sanitary and durable
- Provides easy access for quick and thorough washdowns
- Assures consistent quality of your product due to dependable air temperatures and flow rates
- Allows for system flexibility because it's custom designed for your facility
