

NIAGARA BLOWER COMPANY

No-FROST^o REFRIGERATION SYSTEMS

New Liquid Filter Upgrade for Niagara Spray Coolers

- The new Niagara “Big Blue” filtration system features an easy to maintain, high performance filter element.
- The “Big Blue’s” pressurized filter system has greater filtering capacity than the original gravity fed system, and at the same time eliminates the potential for overflow leakage.
- The “Big Blue’s” filter element has much greater surface area than the previous system, which allows greater liquid flow through the filter, and requires less frequent cleaning.
- Niagara’s new filter system is also much easier to remove and service than the previous “bag type” filter.
- The “Big Blue” filter system can be easily retrofitted to any spray cooler.
- Filter elements are available in polyester, woven rope, and stainless steel.
- Stainless steel filter housing is also available.

Original Filter Design

New Niagara “Big Blue” Filter

ADVANTAGES

- Cleaner liquid
- Greater filtration capacity
- No leakage
- Inexpensive retrofit
- Less frequent cleaning
- Easier serviceability

For more information about this as well as other No-Frost^o system upgrades, please contact the Niagara factory offices in Buffalo, NY.
